SKILLS

Data Analytics: Data Cleaning, EDA, Dashboarding, KPI Reporting, Data Visualization
Tools/Platforms: MS Excel, Tableau, Power BI, MS SQL Server, Jupyter Notebook.
Programming: Python (Pandas, NumPy, Matplotlib, Seaborn), Java, C, HTML, CSS

EXPERIENCE

Vedmantra | Data Analyst Intern

Jun 25 – Jul 25

Data Science using Python

- Cleaned, structured, and formatted large datasets in MS Excel to improve data quality for analysis.
- Created Excel dashboards and charts to track key business metrics and summarize trends for stakeholders.
- Prepared weekly reports and consolidated data into organized templates for faster decision-making.
- Performed data validation and verification to ensure accurate records and consistent reporting.

PROJECTS

World Happiness Analysis

Sep 25

- Analyzed the World Happiness Index dataset across 150+ countries to explore factors influencing global happiness.
- Found and visualized key indicators like GDP per capita, social support, healthy life expectancy, freedom, generosity, and corruption perception using custom plots.
- Generated country-wise and region-wise insights with clear visual trends and statistical summaries.
- **Tools Used:** Python (Pandas, NumPy, Matplotlib, Seaborn), Jupyter Notebook

Hr Analytics Dashboard

May 25

- Built an interactive HR analytics dashboard to track employee count, attrition rate, active employees, and average age.
- Analyzed attrition trends by department, gender, education, and age group to identify high-risk segments.
- Visualized job satisfaction levels by role and demographic-wise attrition using charts and KPIs.
- **Tools/Libraries:** Python, Pandas, NumPy, Tableau.

Airbnb Analysis Dashboard

Aug 24

- Built an tableau dashboard to analyze Airbnb listings by pricing, revenue trends and bedroom count.
- Enabled user-driven exploration with filters, tooltips, and dynamic views for better decision-making.
- Visualized average price per bedroom, yearly revenue growth, and zipcode wise price distribution using maps and charts.
- Highlighted high-priced and competitive zipcodes to support pricing strategy and market comparison.
- **Tools Used:** Tableau, Jupyter Notebook.

Covid-19 Data Analysis and visualization

May 24

- Analyzed a global COVID-19 dataset (306K+ rows) covering confirmed cases, deaths, and recoveries across 200+ countries.
- Cleaned and standardized data by handling missing values and resolving inconsistent country naming.
- Performed country-level aggregation to identify top affected regions and calculate recovery and death.
- Built visualizations using Matplotlib/Seaborn and interactive Plotly choropleth maps to show trends over time and geography.
- **Tools/Libraries:** Python, Pandas, NumPy, Matplotlib, Seaborn.
